Reliable and secure: Cordless desktop set from CHERRY with USB charger cable and AES encryption

The convenient CHERRY B.UNLIMITED AES desktop set ensures secure data transfer as well as high reliability thanks to a power supply with long-term reserves.

Auerbach, 21st January 2013 – high user convenience, reliable in daily use and a high level of security during data transfer: These are the convincing advantages of the new CHERRY B. UNLIMITED AES (JD-0400) wireless desktop sets from CHERRY. The classical double set consists of an elegant keyboard with extra quiet keystroke and a symmetrically formed 3-button mouse with precise infra-red sensor. High-quality NiMH batteries with minimum self-discharge are continually saving power. When power reserves are low, both mouse and keyboard can be charged even while in use by USB-cable. In this way users can continue to work with reliability.

Without interference and tap-proof

Thanks to interference-free 2.4-GHz radio technology with up to ten metres ranges, the set is ideal for all

business applications. 128-bit AES data encryption provides the highest security against tapping, which is particularly important when entering confidential data and information that is vital to the business. The advanced encryption standard is a symmetrical encryption algorithm that has established itself as the de facto standard for the effective securing of data transfer.

Higher user convenience

The elegant keyboard provides very convenient use and convinces with perfect ergonomics as well as especially quiet keyboard stroke. The symmetrical 3-button mouse that belongs to the wireless desktop set works with a precise infra-red sensor and is equipped with adjustable resolution (1000/2000 dpi). Both desktop components are immediately ready for use thanks to plug & play and pre-charged NiMH batteries. Just connect the discreet mini USB receiver and your working day can begin.

Prices and availability: The CHERRY JD-0400 wireless desktop set is available at specialist dealers for €69.99.
